Split clone of a pluggable database 1

Split clone of a pluggable database

You can use SnapCenter to split a cloned pluggable database (PDB).

About this task

If you created a backup of the target CDB where the PDB is cloned, when you split the PDB clone, the cloned PDB is also removed from the backup of the target CDB.

The PDB clones are not displayed in the inventory or resources view.

Steps

1. In the left navigation pane, click **Resources**, and then select the appropriate plug-in from the list.
2. Select the source container database (CDB) from the resource or resource group view.
3. From the Manage Copies view, select **Clones** either from the primary or secondary (mirrored or replicated) storage systems.
4. Select the PDB clone (targetCDB:PDBClone) and then click . The icon is a small square with a diagonal line from the top-left to the bottom-right.
5. Review the estimated size of the clone that is to be split and the required space available on the aggregate, and then click **Start**.
6. Monitor the operation progress by clicking **Monitor > Jobs**.
