VMware ESXi server-related limitations 1

VMware ESXi server-related limitations

The SnapCenter Plug-in for Microsoft Windows is supported on VMware Windows guest. Before you use the Plug-in for Windows to perform provisioning and Snapshot copy management operations, you should be aware of some limitations.

- Installing the Plug-in for Windows on a Microsoft cluster on virtual machines using ESXi credentials is not supported.

You should use your vCenter credentials when installing the Plug-in for Windows on clustered virtual machines.

- All clustered nodes must use the same target ID (on the virtual SCSI adapter) for the same clustered disk.
- When you create an RDM LUN outside of the Plug-in for Windows, you must restart the plug-in service to enable it to recognize the newly created disk.
- You cannot use iSCSI and FC initiators at the same time on a VMware guest OS.
